

FACTORY AUTOMATION

Process Optimization for Warehouse Logistics

Factory automation simplifies and improves processes in production and logistics.

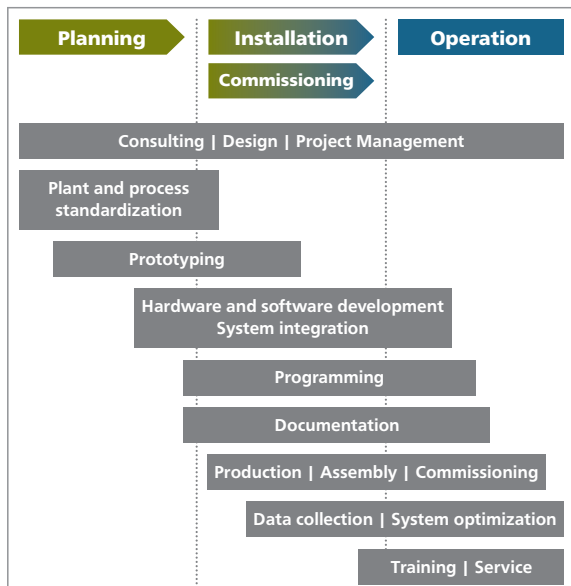

Sophisticated software products combined with custom project management create a powerful and transparent process control system for manufacturing and warehousing.

The systematic integration of system components results in efficient production processes and operations. The result is the continued success of your business.

System integration and optimization lead to faster, more transparent and increasingly flexible processes. They minimize production costs, ensure that existing resources are used to their fullest capacity and enhance the quality of your products – competitive advantages that are crucial for your business.

PSI Technics is your comprehensive service provider

We support your business in the early project planning stage by providing technically sound advice. Once the planning stage is complete, a project manager guides you through all stages – from concept to plant operation. Throughout the entire process you benefit from our comprehensive technological expertise in process optimization. But it does not end there: We provide continuing maintenance and support beyond the warranty period.

Factory automation services by PSI Technics include:

- >> Software development and implementation to ensure tailored process automation
- >> Supervision and optimization of production processes
- >> Automation of positioning systems in the field of logistics
- >> Faster motion sequences in warehouses
- >> Intelligent commissioning tools that ensure reduced start-up times
- >> Continuous process monitoring
- >> Comprehensive support and optimization, including third-party processes and products

FACTORY AUTOMATION

Process Optimization for Warehouse Logistics

Increased efficiency for existing and new facilities in manufacturing and logistics

PSI Technics is your competent and reliable partner when it comes to industrial control systems and process automation for production and warehouse logistics. We assist you every step of the way.

Our service portfolio includes planning, project management, hardware and software design, component manufacturing, assembly, commissioning and staff training. We offer comprehensive support for your project, from concept to completion.

Our cutting-edge control technology ensures maximum process safety and ease of use. Our experienced team retrofits your facilities in the shortest possible time to ensure minimal interruption.

We also assist with short-term retrofitting projects, product replacements and adaptations.

Creative engineering and a wealth of experience enable us to offer intelligent customized solutions for your business. We continue to exceed your expectations. Our application engineers and technicians provide expert advice and use their extensive expertise to leverage the development process and to optimize the performance of your system.

You, too, can benefit from becoming a PSI Technics partner – we continuously work to provide you with the safest, most efficient and optimized solutions for your business.

PSI Technics – YOUR ADVANTAGE:

- >> Supervision and optimization of production processes
- >> Faster motion sequences in warehouses
- >> We develop customized solutions
- >> Cost-effective integration into existing facilities
- >> Comprehensive support, including third-party products and processes
- >> Extensive technical know how
- >> Industry-independent
- >> Fast response, available 24/7
- >> Intelligent commissioning tools ensure reduced start-up times
